

To Create Layer Template and label Boundary features

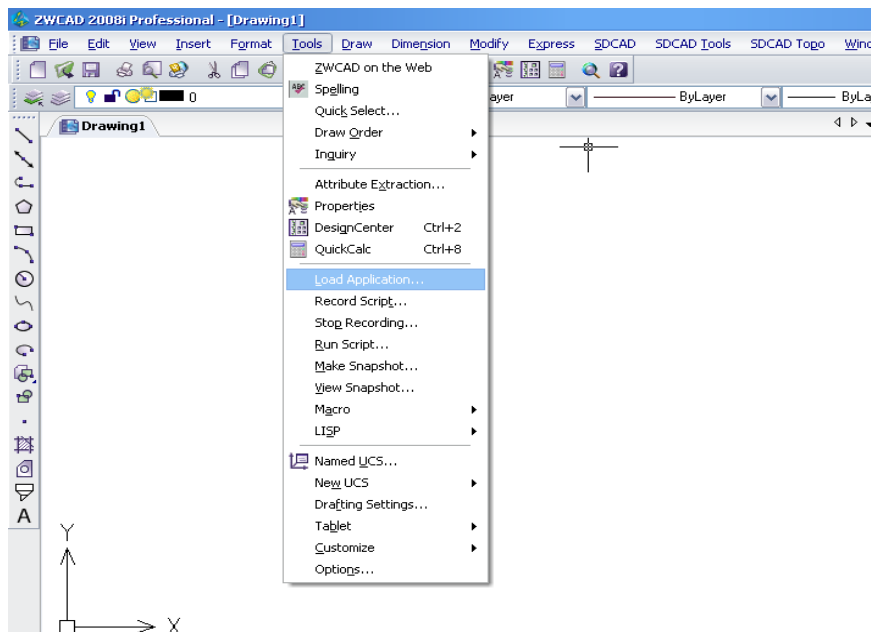

For Licensed Surveyors

Copy **sacadl.dcl** file into C:\programme files\ZWCAD or

C:\programme files\Autocad

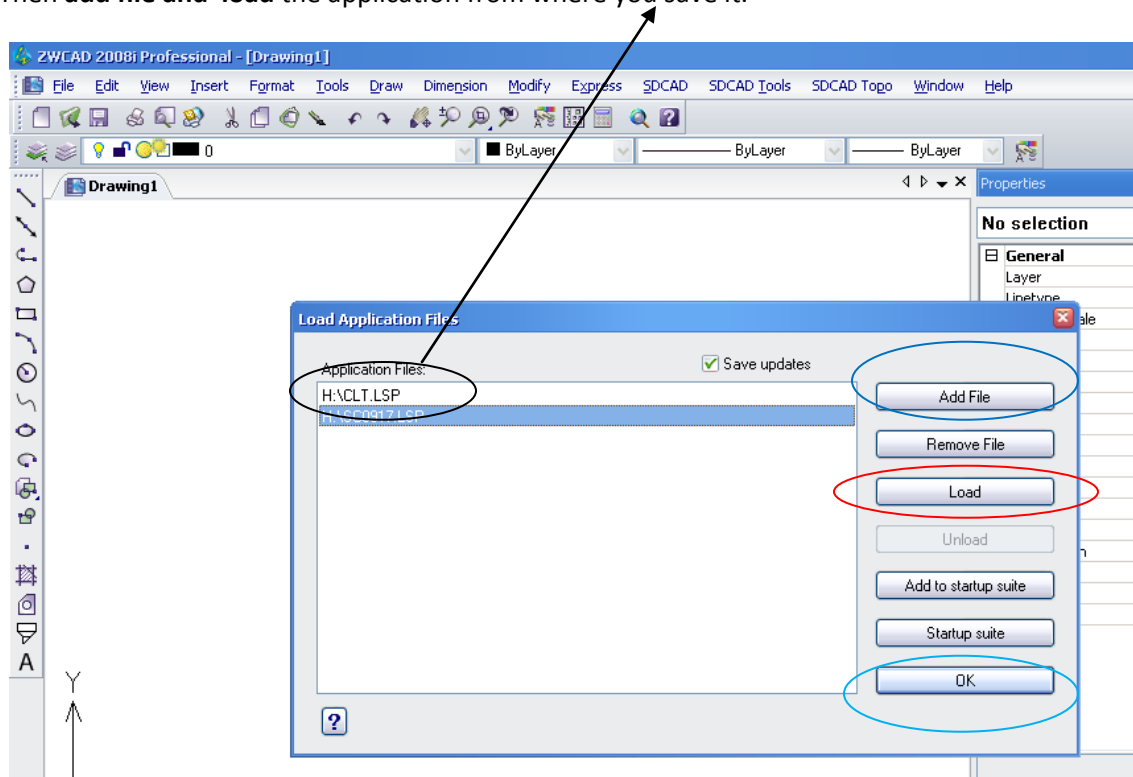

And other files (CLT.LSP, LBDM.LSP, LPF.LSP) should be save into a folder in your computer.

Open ZWCAD or Autocad and Go to **tools , load application**

Then you can see following window.

Then **add file and load** the application from where you save it.

Type **CLT** at command line to create layer template.

Then it will create layer template.

To label the boundary lines and point features

Load the application as you done for create layer template.

Then type **LBDM** to label line features and follow the instructions appears on the command line.

Type **LPF** to label point features and select the point feature file.

Both Department Surveyors and Licensed Surveyors who are using SDCAD, should be

Copy and paste **sacadl.dcl, SC0901.LSP, SC 0917.LSP, SC0924.LSP, SC0927.LSP** to **C:\programme files\ZWCAD2008i** to update your layer template and boundary labels.
